

a TCGA cohort after QC

9,359 input; 57 excluded

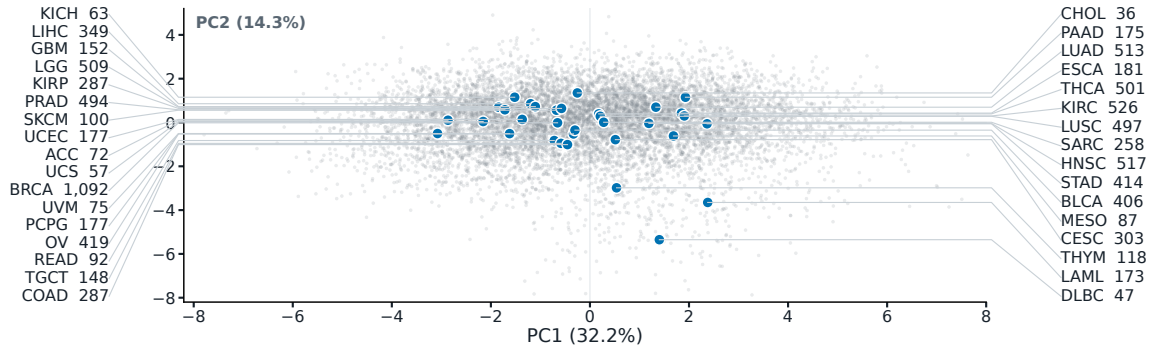

b Within-cohort transforms reduce shared dependence

standardized-axis PCA and all 105 unique score pairs

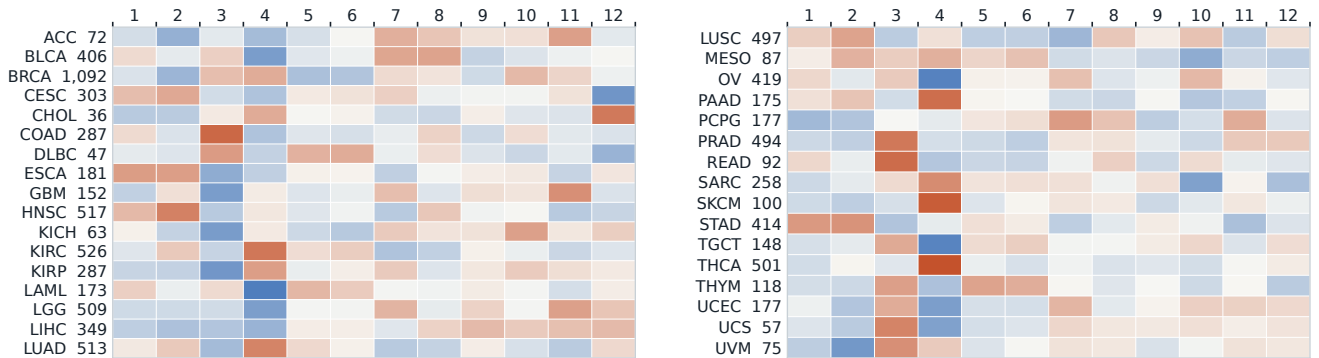

c TCGA-fitted PCA of pooled LOO-axis residual scores

all 9,302 samples and all 33 cancer-type centroids; PC direction is sign-arbitrary

d Within-cancer-type relative mean profiles

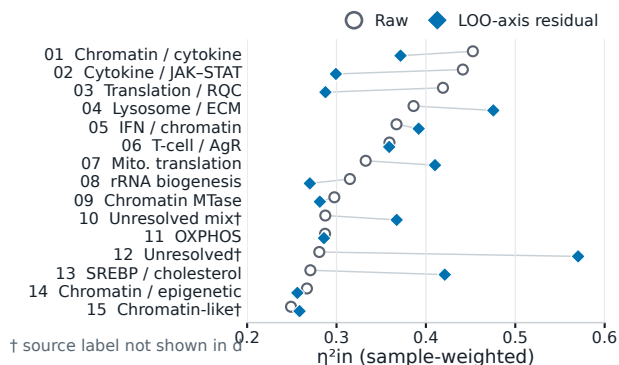

row z-scores across 12 named scores (sample SD); rows alphabetical; colors are not comparable across rows

1 Chr./cyt. · 2 JAK-STAT · 3 Translation · 4 Lys./ECM · 5 IFN/chr. · 6 T-cell
7 Mito-trans. · 8 rRNA · 9 Chr.-MT · 10 OXPHOS · 11 SREBP · 12 Chromatin

e In-sample cancer-type variance fraction

f Residual score dependence remains

all 15 scores in e order; lower triangle only
